Colormap

Global Distances

The cell (i,j) contains the distance between the i-th and j-th color of the color map, which are displayed on the diagonal.

CieLAB 1976

Maximum = 99.53
Average = 37.91
Minimum = 2.73
Deviation = 26.04

CieLAB 2000

Maximum = 98.56
Average = 31.7
Minimum = 1.61
Deviation = 24.79

CieCAM 2002

Maximum = 95.69
Average = 35.95
Minimum = 1.58
Deviation = 25.32

Global Speeds

The cell (i,j) contains the ratio of the distance between the i-th and j-th color of the color map and the difference of their corresponding values. The higher the global speed, the better the global discriminative power of the colormap.

CieLAB 1976

Maximum = 192.59
Average = 105.14

CieLAB 2000

Maximum = 127.24
Average = 83.98

CieCAM 2002

Maximum = 169.7
Average = 98.22

Minimum = 53.59
Deviation = 31.87

Minimum = 29.07
Deviation = 30.84

Minimum = 31.77
Deviation = 33.48

Local Speeds

The height of each column i shows the ratio of the distance between the i -th and $(i+1)$ -st color of the color map and the difference of their corresponding values. The higher the local speed, the higher is the colormap's local discriminative power in this area.

CieLAB 1976

Maximum = 192.59
Average = 110.83
Minimum = 54.7
Deviation = 41.09

CieLAB 2000

Maximum = 127.24
Average = 81.46
Minimum = 32.3
Deviation = 36.05

CieCAM 2002

Maximum = 169.7
Average = 98.39
Minimum = 31.77
Deviation = 45.01

Global Triangle Distance Difference

The cell (i,j) contains the absolute value of the minimum of $|c(i)-c(j)|-|c(i)-c(k)|$ over all k between i and j ($i < k < j$). As long as it is positive, the middle color is closer to each of the two outer ones than they are to each other. That means, the colormap has an intuitive order everywhere between i and j . That is why, we only plot the values that are negative, i.e. where the global, intuitive order is violated.

CieLAB 1976

Minimum = 0.3

CieLAB 2000

Minimum = 0.14

CieCAM 2002

Minimum = 1.2

If there are k between i and j that violates the intuitive order, we plot the color $c(k)$ that does so the most, i.e. the one that produces the minimum displayed in the visualization above
